

ILL BILL README

To play *ILL BILL* simply take the IllBill.exe/IllBill.apk (whichever is your preferred platform) from the “PC Standalone”/”Android APK” folders and begin the process:

- **ANDROID:** Surefire way, open up Unity 5 and select “Build and Run” in the options menu. This will build the application and place it into any connected android device.
- **ALTERNATIVE:** To “Sideload” IllBill.apk for **Android**. Place the apk file in the android device’s file manager and then open the file and hit “install.” You may need to configure your device’s security settings for this to work. ****This is not recommended**** Please consult this PDF for additional assistance, specifically page 3:
http://vbraille.cs.washington.edu/doc/how_to_install_apks.pdf
- **PC:** Double click the .exe file named “IllBill.exe” in the “PC Standalone” directory.

Note: Never compile with a GameData.txt file in the main directory, this can mess up the compilation process and this file should be deleted or moved out of the directory until after the compilation.

****Thanks from the ILL BILL team****
